

AD07000 DPF Cleaner & Regenerator

Document version: November 29th 2017

Description

MPM Diesel Particulate Filter (DPF) Cleaner and Regenerator is an organo-metallic diesel fuel additive to be used as a catalyst for the regeneration of diesel particulate filters.

This additive lowers the ignition temperature of soot collected in the diesel particulate filter which optimises the filter regeneration process.

The unique combination will assist in keeping the catalytic converter, exhaust gas recirculation system (EGR) as well as the turbo compressor and its variable geometry vanes clean from deposits.

Main benefits

- Ensures complete and rapid diesel particulate filter regeneration.
- Reduces ignition temperature of trapped soot ensuring extraordinary combustion at temperatures typically encountered during normal engine operation.
- Prevents performance loss caused by clogged diesel particulate filters and incomplete combustion of soot.
- Extends lifetime of the diesel particulate filter.
- Most economic way of soot reduction without any changes to the fuel system.

Application

For all diesel engines including common rail and turbocharged engines with standard or retrofitted diesel particulate filter (DPF).

Appliance instruction

Pour contents of 250 ml bottle in the fuel tank preferable before refueling with diesel.

The contents of one 250 ml bottle is suitable to treat 40 to 60 litres of diesel fuel.

Packing units

ART. NO.	VOLUME	ITEMS PER UNIT	ITEMS PER PALLET
AD07250	0.25 L	6	1548
EF-AD07250	0.25 L	6	-
EF-AD07999	1000 L	1	-
AD07999	1000 L	1	-

Typical characteristics

TEST	VALUE	
Density at 15°C	~ 0774	kg/l
Colour	amber	
Flashpoint PM	> 40	°C
